

# lesson twenty-five - student resource sheet

**Lesson Objective:** Write an equation of a line using the slope-intercept form, or using the slope and point on the line. Write an equation of a line given two points on the line.

## Vocabulary Box

**slope** – The steepness of a line expressed as a ratio. It is also called the rise over run, or the ratio of the vertical change to the horizontal. The slope can be found using any two points on the line. Example: The slope of the line through the points (1, 2) and (5, -6) is -2,  
$$\frac{(-6) - 2}{5 - 1} = \frac{-8}{4} = -2.$$

**y-intercept** – The value of y at the point where a line crosses the y-axis and x equals zero. Example: A line crossing the y-axis at (0, 3) has a y-intercept of 3.

**slope-intercept form** – A linear equation in the form  $y = mx + b$ , where m is the slope and b is the y-intercept. Example:  $y = 3x - 2$ , where the slope is 3 and the y-intercept is -2.

## Guided Practice

---

You will complete the following practice problems with your partner. Then your teacher will review the answers.

Directions: Find the equation of each line in slope-intercept form.

1. slope of  $-1$  and y-intercept of  $-2$
2. slope of  $5$  and point on line of  $(6, -1)$
3. two points on line of  $(9, -5)$  and  $(6, 7)$
4. slope of  $\frac{7}{8}$  and point on line of  $(4, 2)$
5. two points on line of  $(4, 2)$  and  $(6, -1)$

# lesson twenty-five - student resource sheet

## Summary/Closure

---

### A. Vocabulary Words

Directions: Match each item in the left column with its best match in the right column.

- |                                  |                         |
|----------------------------------|-------------------------|
| 1. b                             | A. slope                |
| 2. m                             | B. y-intercept          |
| 3. $y = mx + b$                  | C. slope-intercept form |
| 4. $\frac{y_2 - y_1}{x_2 - x_1}$ |                         |
| 5. the y value of $(0, -4)$      |                         |
| 6. a linear equation             |                         |

### B. Summarize What We Learned Today

Directions: Write a linear equation in slope-intercept form for the following three conditions: given the slope and y-intercept, given the slope and a point on the line, given two points on the line. Then explain each process. You will use this explanation as your own reference sheet.

# lesson twenty-six - student resource sheet

**Lesson Objective:** Write an equation of a line using the slope-intercept form, or using the slope and point on the line. Write an equation of a line given two points on the line.

## Vocabulary Box

**slope** – The steepness of a line expressed as a ratio. It is also called the rise over run, or the ratio of the vertical change to the horizontal. The slope can be found using any two points on the line. Example: The slope of the line through the points (1, 2) and (5, -6) is -2,  
$$\frac{(-6) - 2}{5 - 1} = \frac{-8}{4} = -2.$$

**y-intercept** – The value of y at the point where a line crosses the y-axis and x equals zero. Example: A line crossing the y-axis at (0, 3) has a y-intercept of 3.

**slope-intercept form** – A linear equation in the form  $y = mx + b$ , where m is the slope and b is the y-intercept. Example:  $y = 3x - 2$ , where the slope is 3 and the y-intercept is -2.

## Independent Practice

Please complete the following practice problems on your own. Your teacher will review the answers.

Directions: Find the equation of each line.

1. slope is 4 and y-intercept is  $\frac{2}{5}$
2. slope is  $\frac{5}{6}$  and point on the line is (12, 18)
3. two points on the line are (-6, -7) and (-8, -9)
4. slope is -8 and point on the line is (-2, 2)

- 5. two points on the line are  $(-4, 0)$  and  $(-3, -1)$
- 6. slope is 2 and y-intercept is  $-5$
- 7. two points on the line are  $(-10, 4)$  and  $(5, -5)$

---

Directions: Find the equation of each line.

- A. x-intercept of 5 and y-intercept of  $-6$
- B. two points on line of  $(3, 4)$  and  $(5, 4)$
- C. two points on line of  $(-2, 6)$  and  $(-2, 11)$

# lesson twenty-six - student resource sheet

## **Problem** **Solving**

---

Graph the following lines on the same coordinate grid.

- $y = \frac{4}{3}x - 2$
- $y = 2$
- $x = 6$

1. Find the area of the right triangle enclosed by these three lines.
2. Write the equations of three lines that will enclose a triangle with an area of 24 square units. Graph these lines, and justify your answer.
3. Write the equations of three lines that will enclose a triangle with an area of 30 square units. Graph these lines, and justify your answer.
4. Write the equations of four lines that will enclose a rectangle with an area of 32 square units. Graph these lines, and justify your answer.

# lesson twenty-six - student resource sheet

---

Directions: Find the equation of each line.

1. slope of 4 and y-intercept of  $-1$
2. slope of  $-6$  and point on line of  $(2, -10)$
3. two points on line of  $(-4, 3)$  and  $(8, 6)$

# lesson twenty-seven - student resource sheet

**Lesson Objective:** Draw a scatter plot from given data; find the line of best fit, and make predictions or decisions.

## Vocabulary Box

**scatter plot** – A graph with two sets of data plotted as ordered pairs on a coordinate plane.

**line of best fit** – A line that lies as close as possible to the points in a scatter plot.

**interpolate** – Estimate values that lie between two known values.

**extrapolate** – Estimate values that lie beyond a known set of values.

## Guided Practice

Complete the following practice problems with your partner. Then your teacher will review the answers.

Directions: Complete the following for the table below.

<b>Weight of Ice Cream Cone</b> (in ounces)	<b>Time Taken to Eat Cone</b> (in minutes)
6	12
6	13
7	15
7.5	16
8	15
8.5	17
9	18
9	19

1. Write ordered pairs for the values in the table.
2. Choose an appropriate scale and graph the ordered pairs.

# lesson twenty-seven - student resource sheet

3. Draw a line of best fit for the data.
4. Find an equation for your line of best fit.
5. Approximate how long it would take to eat a cone with a weight of 6.5 ounces.
6. Approximate how long it would take to eat a cone with a weight of 1 pound (if you didn't get sick and it didn't melt!).

## Summary/Closure

---

### A. Vocabulary Words

Directions: Describe each of the following terms in your own words.

1. scatter plot
  2. line of best fit
  3. interpolate
  4. extrapolate
-

## B. Summarize What We Learned Today

Directions: Graph six ordered pairs that lie approximately but not exactly in a line. Then draw a line of best fit. Find an equation of your line of best fit. Then explain the process of determining a line of best fit for a scatter plot. You will use this explanation as a personal reminder.
