

# Look Twice!

## A Guide to Nature's Look-Alikes

When you look, always look twice,  
and maybe even listen.  
You're bound to see a thing or three  
that everyone else is missing.

## Bees and Wasps

Look alike? Look twice!

Bees are fuzzy.

Wasps are smooth.

Wasps' legs are stick-like  
and pollen-free.

Bees collect yellow pollen on their hind legs.

Bees can sting only once.  
Wasps sting many times.

# Rabbits and Hares

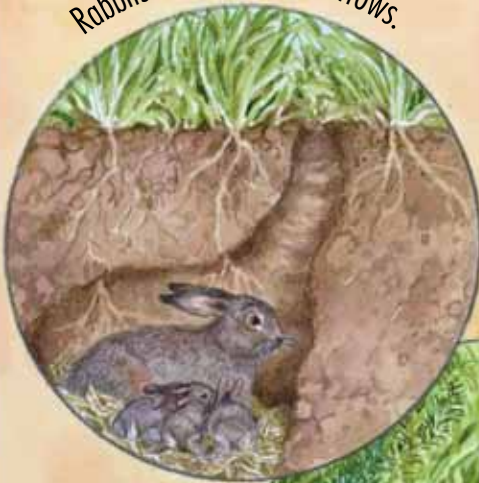

Look alike? Look twice!

Rabbits are small, with short legs.

*Rabbits live in family burrows.*

*Hares run alone and sleep in tall grass.*

Hares are tall and long-legged.

Newborn bunnies are naked and blind.

Newborn hares are called leverets and are furry and open-eyed.

# Moths and Butterflies

Look alike? Look twice!

Moths rest with wings flat.  
Butterflies rest with wings clapped.

Moth antennae are short and feathery.

Whoa!

Butterfly antennae are slender, with little knobs at the end.

Moths take flight at night.  
Butterflies fly in daylight.

# Crickets and Grasshoppers

Look alike? Look twice!

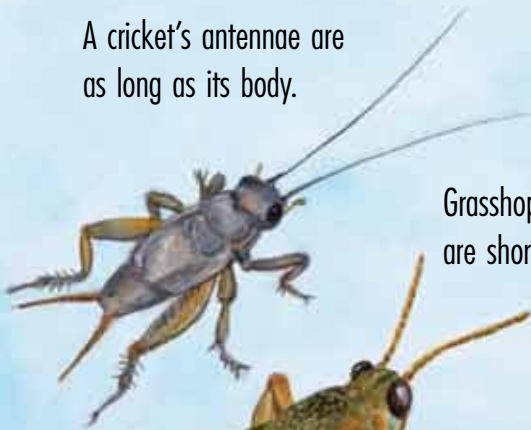

Crickets have no wings.

Grasshoppers have four wings.

A cricket's antennae are as long as its body.

Grasshopper antennae are short.

A cricket goes "Chirp!"

A grasshopper makes a "rattle, rattle" sound.

Chirp

Rattle,  
rattle

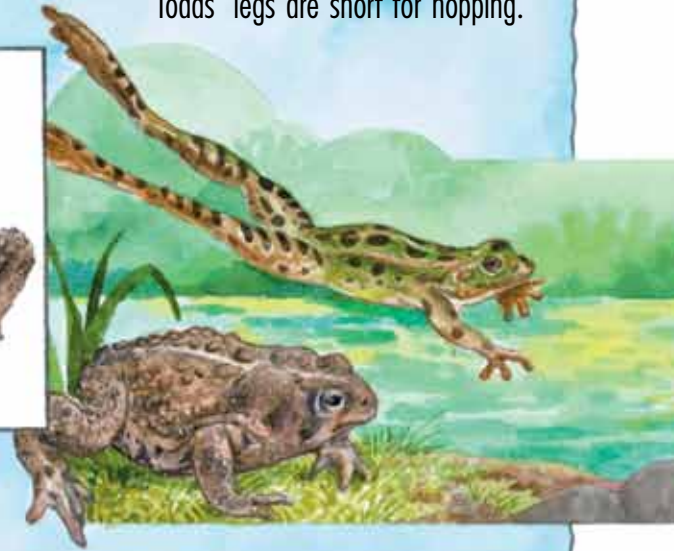

# Frogs and Toads

Look alike? Look twice!

Frogs' legs are long for leaping.  
Toads' legs are short for hopping.

Frogs are smooth and wet.

Toads are nubby and dry.

Frogs lay eggs in clusters.

Toads' eggs form chains.

So, when you look, always look twice,  
and maybe even listen.  
Things that look a lot alike  
may really be quite different.
